

The TS700A is designed for small to large LCD/plasma screens.

The lift has an incredible stroke compared to the required build-in height, which makes this unit usable for installation almost everywhere. The stroke can also be adjusted to limit the stroke height and/or the stroke drop.

Furthermore this lift has an anti-squeeze function. If the moving parts of the lift or the Plasma/LCD mounted on the lift meet an obstacle in the down-going motion, the lift will stop and reverse.

The pressure given before reversing is equal to the weight of the TV that is mounted.

Remote controlled with RF.

Peak load of 100 kg and working load of 65/29 kg

Dimensions [mm]
